

REASONING BASED DI_19-9-2026

Directions for questions 1 to 5: Answer these questions on the basis of the information given below.

The following figure gives the result of a survey among 150 people in a colony about the vehicle they own among Scooter, Motorcycle, Car and SUV.

Direction for questions 1 to 5: Type in your answer in the input box provided below the question.

How many people own at least one of the four types of vehicles?

	5 (S only)	7 (S + M)	10 (M only)	
Row 1: Car ONLY (C)	13 (S + C)	6 (S + M + C)	7 (M + C)	9 (C only)
Row 2: Car & SUV (C + V)	8 (S + C + V)	3 (ALL FOUR)	6 (M + C + V)	11 (C + V)
Row 3: SUV ONLY (V)	4 (S + V)	2 (S + M + V)	15 (M + V)	10 (V only)

Solution:

The number of people who own exactly one type of vehicle = $5 + 10 + 9 + 10 = 34$
 The number of people owning none of the vehicles = $150 - 116 = 34$. Ans : (34)

Direction for questions 1 to 5: Type in your answer in the input box provided below the question.

How many people own exactly two types of vehicles?

Solution:

The number of people owning exactly two type of vehicles
 $= 13 + 4 + 15 + 7 + 11 + 7 = 57.$ Ans : (57)

Direction for questions 1 to 5: Type in your answer in the input box provided below the question.

How many people own at least three types of vehicles?

Solution:

Number of people owning three types of vehicles
 $= 6 + 6 + 8 + 2 = 22.$
Number of people owning four types of vehicles = 3
People owning at least three types of vehicles $= 22 + 3 = 25.$
Ans : (25)

Direction for questions 1 to 5: Type in your answer in the input box provided below the question.

How many people own exactly two types of vehicles among scooter, motorcycle and car?

Solution:

People owning Scooter and Motorcycle = 7.
People owning Scooter and Car = 13.
People owning Motorcycle and Car = 7.
The required value $= 7 + 13 + 7 = 27.$
Ans : (27)

Direction for questions 1 to 5: Type in your answer in the input box provided below the question.

How many people own both a scooter and an SUV but not a car?

Solution:

The required value = $4 + 2 = 6$.

Ans : (6)

Direction for questions 6 to 10: Answer these questions on the basis of the information given below.

The table gives partial details of the marks scored by six students in a test which had 50 questions in total. Four marks are awarded for each correct answer while two marks are deducted for each wrong answer. One mark is deducted for each question left unanswered. The following table gives details of the six students who wrote the test.

Students	Attempted	Unattempted	Correct	Marks
Arvind				120
Babu		17		
Chandra			31	
David				
Edward	34			
Farhan				

What is the maximum marks that Chandra could have scored?

- ☐ a) 124
- ☐ b) 105
- ☐ c) 102
- ☐ d) 86

Solution:

The maximum marks would be when Chandra attempted only 31 questions and all of them are correct.

The marks = $31 \times 4 - 19 \times 1 = 105$. Choice (B)

If the number of correct answers for David was 26, which of the following could be the marks he scored?

- ☐ a) 51
- ☐ b) 55
- ☐ c) 72
- ☐ d) 81

Solution:

The minimum and maximum marks for David are as follows.

$$\text{Maximum} = 26 \times 4 - 24 \times 1 = 80.$$

$$\text{Minimum} = 26 \times 4 - 24 \times 2 = 56.$$

Any score between 56 and 80 is possible.

Choice (C)

What is the least marks that Babu could have scored?

☐ a) -83 (Correct Answer - ✓)

- ☐ b) -71
- ☐ c) -59
- ☐ d) None of these

Solution:

The minimum marks would be when all the 33 questions he attempted were wrong.

$$\text{The score would be } 33 \times (-2) + 17 \times (-1) = -83.$$

Choice (A)

If Farhan had the highest marks, at most how many questions did he leave unattempted?

☐ a) 15 (Correct Answer - ✓)

☐ b) 16

☐ c) 17

☐ d) 18

Hide Correct Answer

Hide Solution

PREVIOUS

NEXT

Solution:

Farhan scored more than 120 marks as the maximum marks of Edward and the marks scored by Arvind is 120.

To score more than 120 marks, Farhan has to attempt at least 35 questions and he could have left the remaining 15 questions.

Choice (A)

What is the maximum possible difference in the marks scored by Chandra and Edward?

☐ a) 126

☐ b) 141

☐ c) 178

☐ d) 189 (Correct Answer - ✓)

Solution:

The maximum difference would be when Chandra scores the maximum possible and Edward the minimum possible.

Maximum possible marks of Chandra
 $= 31 \times 4 - 19 \times 1 = 105$

Minimum possible marks of Edward
 $= 34 \times (-2) + 16 \times (-1) = -84$

The maximum difference $= 105 - (-84) = 189$.

Choice (D)

Direction for questions 11 to 15: Answer these questions on the basis of the information given below.

The following pie charts give the details of students in a business school. Pie chart 1 gives the distribution of students based on their specialization and pie chart 2 gives the region wise distribution of the students.

If no student from the North and South regions took marketing as their specialization, what is the least percentage of International students who took marketing as their specialization?

☐ a) 14.7

☐ b) 16.1

☒ c) 17.4 (Correct Answer - ✓)

☐ d) 18.7

If at least 15% of the students from each region took marketing as their specialization, then what is the maximum percentage of students specializing in Systems from any one region, as a percentage of the total students from that region?

☐ a) 50.0

☐ b) 53.46

☐ c) 56.25

☐ d) 58.7

Atleast how many specializations have students from more than one region?

- ☐ a) 1
- ☐ b) 2
- ☐ c) 3
- ☐ d) 4

If at most one third of the students from any region specialize in operations, what is the minimum number of regions having students specializing in operations?

- ☐ a) 1
- ☐ b) 2
- ☐ c) 3
- ☐ d) 4

If at most half of the students from any region took marketing as their specialization, what is the minimum number of regions having students specializing in marketing?

- ☐ a) 1
- ☐ b) 2
- ☐ c) 3
- ☐ d) 4
